MAGILL & CO. OPERATING FARGO SEED HOUSE

DIAL
6433

Since 1887 at Broadway & Front Street

APRIL 20, 1944

FARGO,
N. D.

WHOLESALE FIELD SEEDS FOR DEALERS ONLY

We quote today's prices subject to market variations and stock unsold. Goods invoiced at current value day order is received. Prices below are F. O. B. Fargo or Moorhead. Sacks extra at wholesale value. We carry large stocks and ship orders same day as received.

TERMS: NET CASH, NO DISCOUNT. THIS LIST CANCELS ALL PREVIOUS PRICES.

BRANCH WAREHOUSE STOCKS at Williston, N. D. and Minot, N. D. Add 15c per 100 lbs. or 10c per bu. for prices F.O.B. these points

NO WARRANTY

We give no warranty, express or implied, as to description, quality, productiveness, or any other matter of any seeds we send out, and we will not be in any way responsible for the crop.

ANNOUNCEMENT TO OUR TRADE

MAGILL & CO. will mail their wholesale prices to and solicit recognized dealers only. Magill & Co. have been operating The Fargo Seed House since 1887. Your business is appreciated.

TOPS BRAND

Will be your guarantee of a fancy, high purity, high germinating and well prepared seed at all times.

SUPERSEED BRAND

Is what the brand implies, a truly premium grade, for those who demand an extra fancy quality.

SEED TREATMENT PAY!**

21 Bushels More Corn From Treated Seed

What Experimental Stations say about SEMESAN JR.

ILLINOIS—"Hybrid seed benefits from seed treatment just as much as open-pollinated seed." . . . "One of the best disinfectants for seed corn now on the market is New Improved Semesan Jr., the active ingredient of which is ethyl mercury phosphate."

IOWA—"In most cases good treatment will give a more uniform stand and also result in an increase in yield ranging from 1 to 15 bushels per acre. . . ."

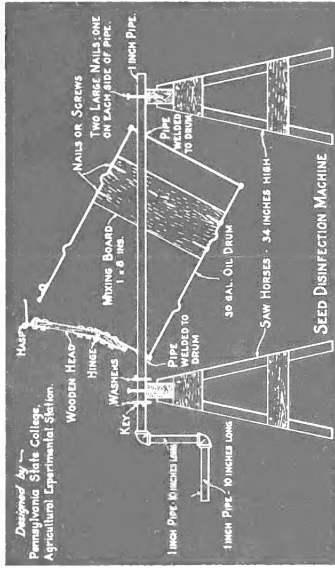

MINNESOTA—" . . . New Improved Semesan Jr. 2 oz. to the bushel, help to control seedling blight in corn. This disease is important when corn is planted early or on cold wet soil." . . . "It Pays to Treat Sweet Corn Seed! . . . Seedling blight is a common and destructive disease of sweet corn in Minnesota. It is the most common cause of poor stands and low yields."

NEW JERSEY—"Mercury Dust Treatments for Corn (New Improved Semesan Jr. . . .) (Applicable to the control of certain seedling diseases.) Use this dust at the rate of 2 ounces per bushel of dry, shelled seed corn. . . ."

NORTH DAKOTA—" . . . Seed corn should be treated. A good treatment will ward off seed decay and some of the seedling blights which often develop when the early season is unfavorable for corn. One of the better materials for treating corn is Semesan Jr. . . ."

TREATING EQUIPMENT

The only equipment required for treating small quantities of seed is a discarded 40-quart milk can, an old butter-churn or similar container. Larger amounts can be treated in a rotary drum such as shown below.

This effective treater can be made from a 30-gallon oil drum at a cost of \$2 to \$5. Write for plans and treating chart.

New Improved SEMESAN JR.

PRICES

1½ oz. \$.13 1 lb. . . . \$.75 25 lb. . . \$ 12.50

"BUY" A BETTER CORN CROP FOR $\frac{3}{10}$ ¢ AN ACRE!

Semesan Jr. dry treatment of hybrid or open-pollinated FIELD, SWEET or POP corn seed helps reduce seed rotting; improves stands and sturdiness of corn seedlings; generally increases yields —an actual average of 4 bushels an acre in 9-year tests. It pays to use Semesan Jr.!

CORN DISEASE ORGANISMS that cause seed rotting, missing hills and reduced yields may lie in wait on the seed you plant. Harmful fungi (molds) such as *Diplodia* and *Gibberella* are often present on the seed and in the soil. They attack the unprotected seed, and weaken or stunt the seedling.

The four decaying kernels on the right mean missing hills.

TREAT YOUR SEED CORN—To check seed rotting and certain seed-borne diseases, experiment stations and the United States Department of Agriculture recommend treatment of seed corn with an ethyl mercury phosphate dry disinfectant such as Semesan Jr.

MAKES EARLY PLANTING SAFER—

This low-cost treatment kills most harmful organisms on the seed coat, and helps protect it from decay by soil-borne organisms. Treating seed with Semesan Jr. may save replanting, especially in a cold wet spring.

Semesan Jr. increases stands from diseased seed.

Cold, wet weather at planting time cannot now be forecast. Seed treatment with Semesan Jr. is inexpensive insurance against many seedling diseases and seed rotting which cause missing hills and hills with only one stalk. Fifty-one farm demonstrations in the Corn Belt extending over 3 years showed that Semesan Jr. increased stands 5 to 15%.

The U. S. Dept. of Agriculture says: "... treatments usually improve stands and yields of field and sweet corn. . . ."

HIGHER YIELDS

are often secured with Semesan Jr. In 9 years' tests by the Iowa Experiment Station, treatment increased the yield an average of 4.0 bushels per acre.

The Illinois Station reported an average increase in yield of about 3 bushels an acre. Under similar conditions Semesan Jr. may help add 4 extra bushels to your acre yield —and you can "buy" this increase for only 9/10¢ an acre!

EVERYTHING YOU WANT IN A SEED CORN TREATMENT!

Treat when Convenient—Dry seed to be stored in a dry building may be treated as directed with Semesan Jr. at any convenient time.

No Clogging in Planter—Semesan Jr. does not reduce the planting rate.

Practically Dustless—Semesan Jr. is practically dustless—little flying dust during treating and none during planting.

Safe on Seed—Semesan Jr. when properly applied is harmless to seed. Years of use prove this!

Low Cost—One pound of Semesan Jr. treats 10.7 bushels of seed at a cost of 75¢—only 9/10¢ an acre!

Easy to Apply—Mix the correct amount of dry Semesan Jr. and seed in a suitable container (see last page). For large quantities use a power treater.

DOUBLE ACTION Disinfecting Vapor—plus Protecting Film

Immediate Action—When Semesan Jr. is applied to seed corn, part of the active ingredient slowly changes to a gas or vapor. This vapor is highly effective in killing the germs and spores in every crack and cranny on the seed coat, but relatively harmless to the seed itself. This disinfecting action begins at once after the seed is treated.

Long-Lasting Protection—Another part of the active ingredient of Semesan Jr. dissolves and is taken up or adsorbed by the seed coat. It rapidly forms on the seed a protective film—an armor-plate against soil-borne organisms—which cannot be removed by rains or any other natural means. Seed treated with Semesan Jr. keeps this protective coating almost indefinitely.
